<https://bit.ly/portfolio-richbuyer>

Tech Stack

- ViteJS - JS Bundler/Framework
- Tailwind CSS - CSS Framework

NanoByte Wallet

A mobile app for secure management of cryptocurrency assets, enabling safe storage, real-time portfolio updates, and seamless transactions on the go.

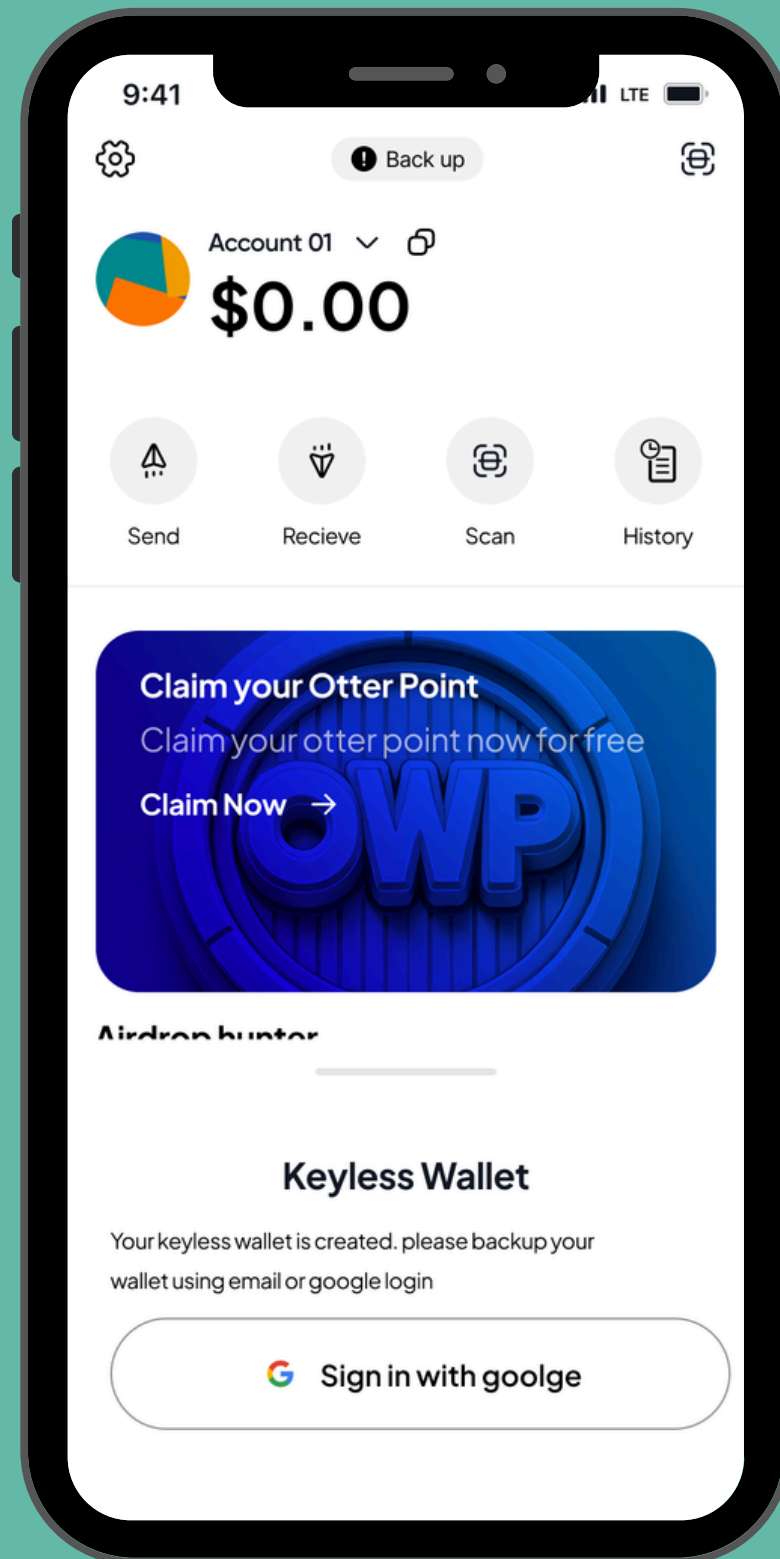

My contribution :

- fixed bugs and improved the stability of existing features
- revamped UI/UX to enhance usability and visual consistency
- continued development and implementation of new features
- prepared release builds and managed deployment to the Google Play Store and Apple App Store

Tech Stack

- React Native, Typescript, Zustand
- Ethers.js

Otter Wallet

A mobile keyless crypto wallet app that enables secure asset management, real-time balance tracking, and seamless transactions, with simplified backup via email or Google login.

My contribution :

- Built the mobile frontend application from scratch
- Implemented responsive and scalable UI components based on product requirements
- Integrated APIs and blockchain-related services into the mobile interface
- Collaborated closely with backend and design teams to ensure seamless functionality and user experience

Tech Stack

- React Native, Typescript, Zustand
- SolanaWeb3.js, SPL Token, Jupiter SDK, MPC

Indonesia Digital Bond Tokenization

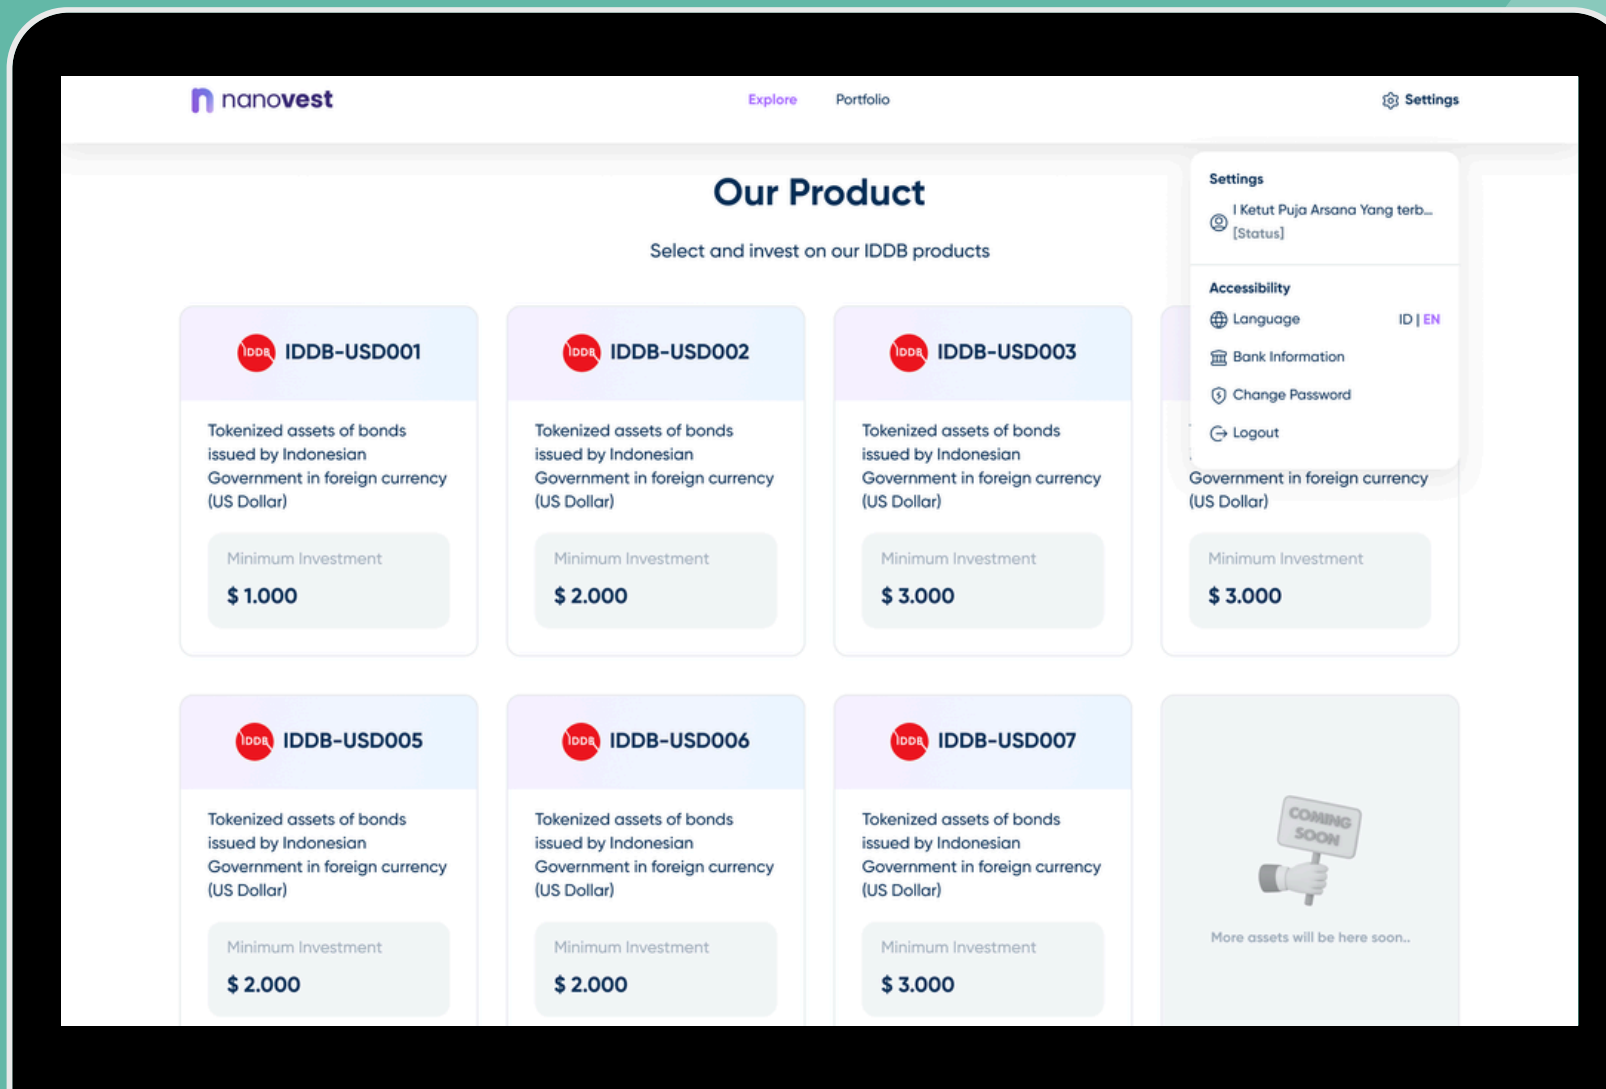

The first and leading Real-World Asset tokenization platform in Indonesia, focused on digitizing government bonds through blockchain, developed in collaboration with licensed financial institutions.

My contribution :

- Built and led the frontend development of IDDB from scratch to production
- Implementing secure authentication
- Real-time bond dashboards
- Smart contract integrations

<https://bit.ly/portfolio-iddb>

Tech Stack

- Next.js, Typescript, Zustand
- TailwindCSS, NextUI
- Ethers.js, ConnectKit
- Jest & React Testing Library

Internal Finance Tool

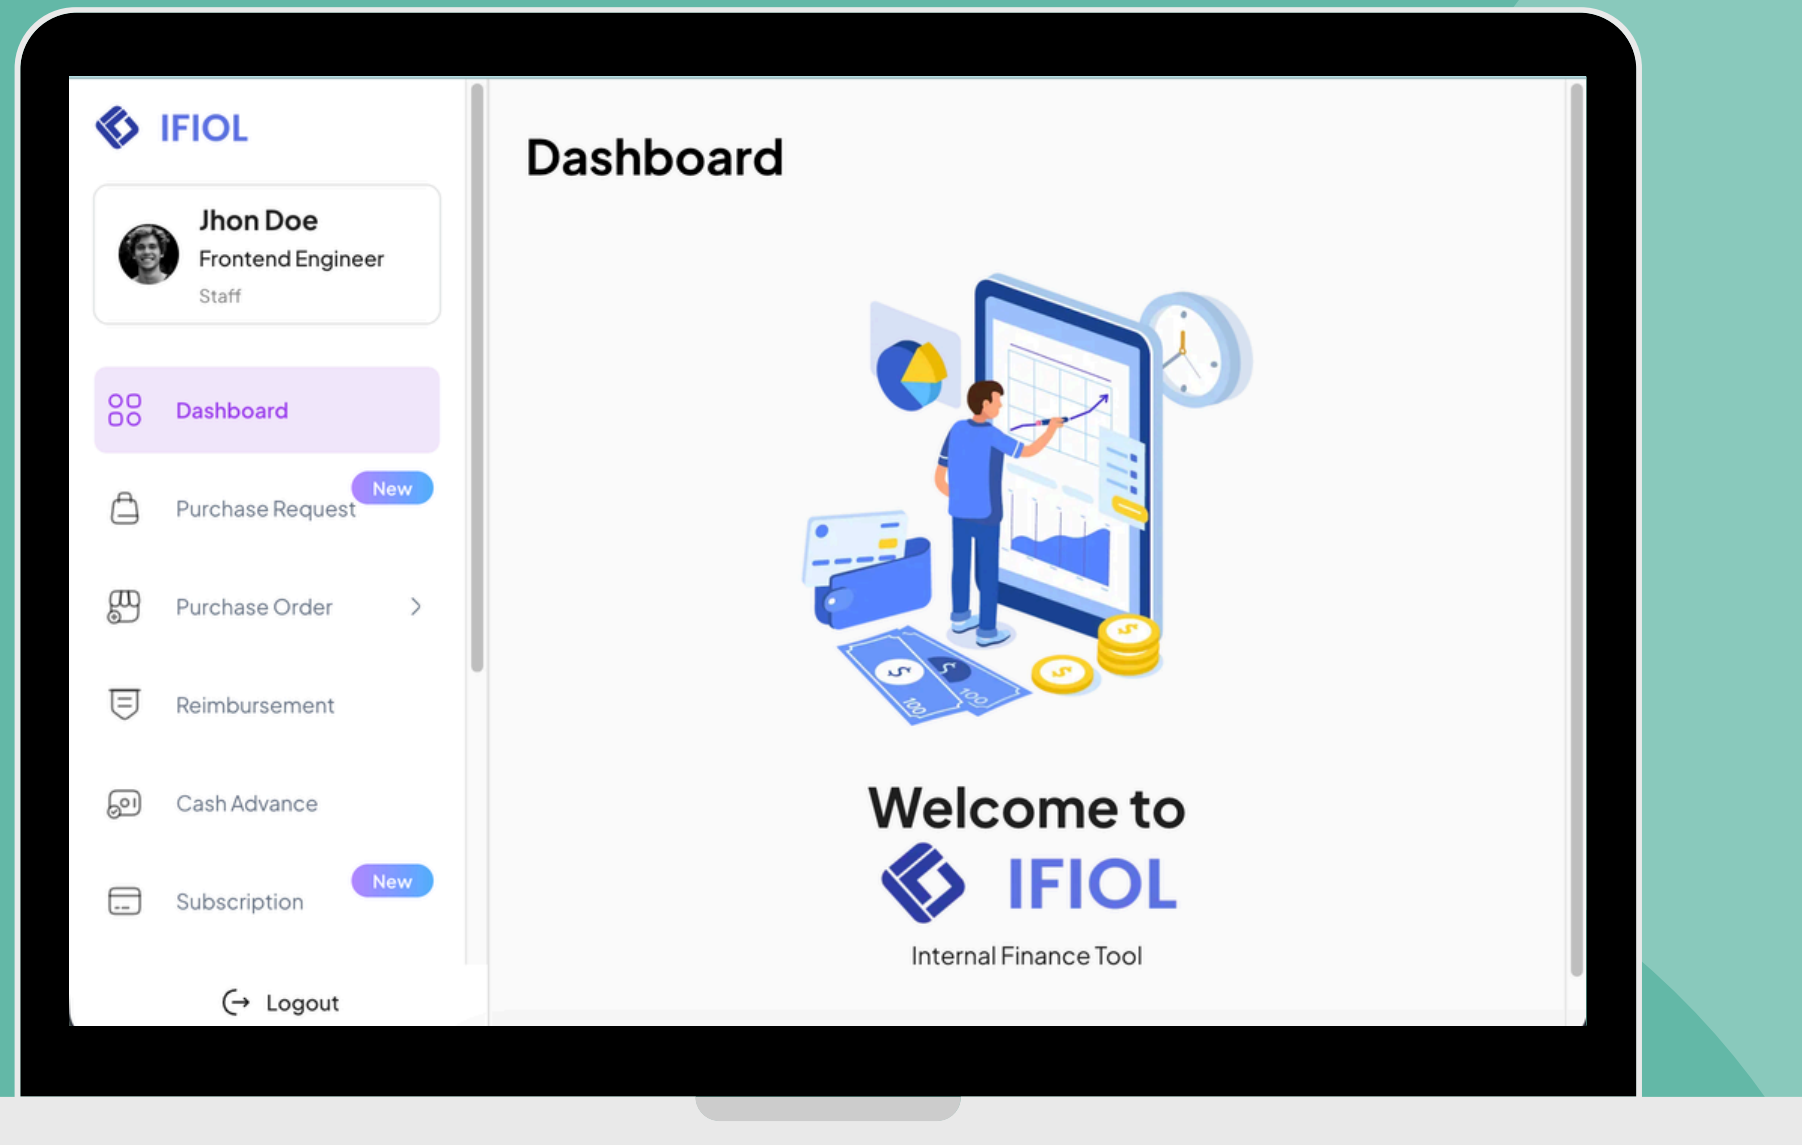

An internal financial management system used to handle reimbursement, cash advance, purchase orders, subscriptions, and vendor management with structured approval workflows and centralized tracking.

My contribution :

- Contributed to system stability and scalability by fixing bugs
- Optimizing existing code
- Implementing new features
- Adding unit tests to improve overall reliability

<https://bit.ly/portfolio-ifiol>

Tech Stack

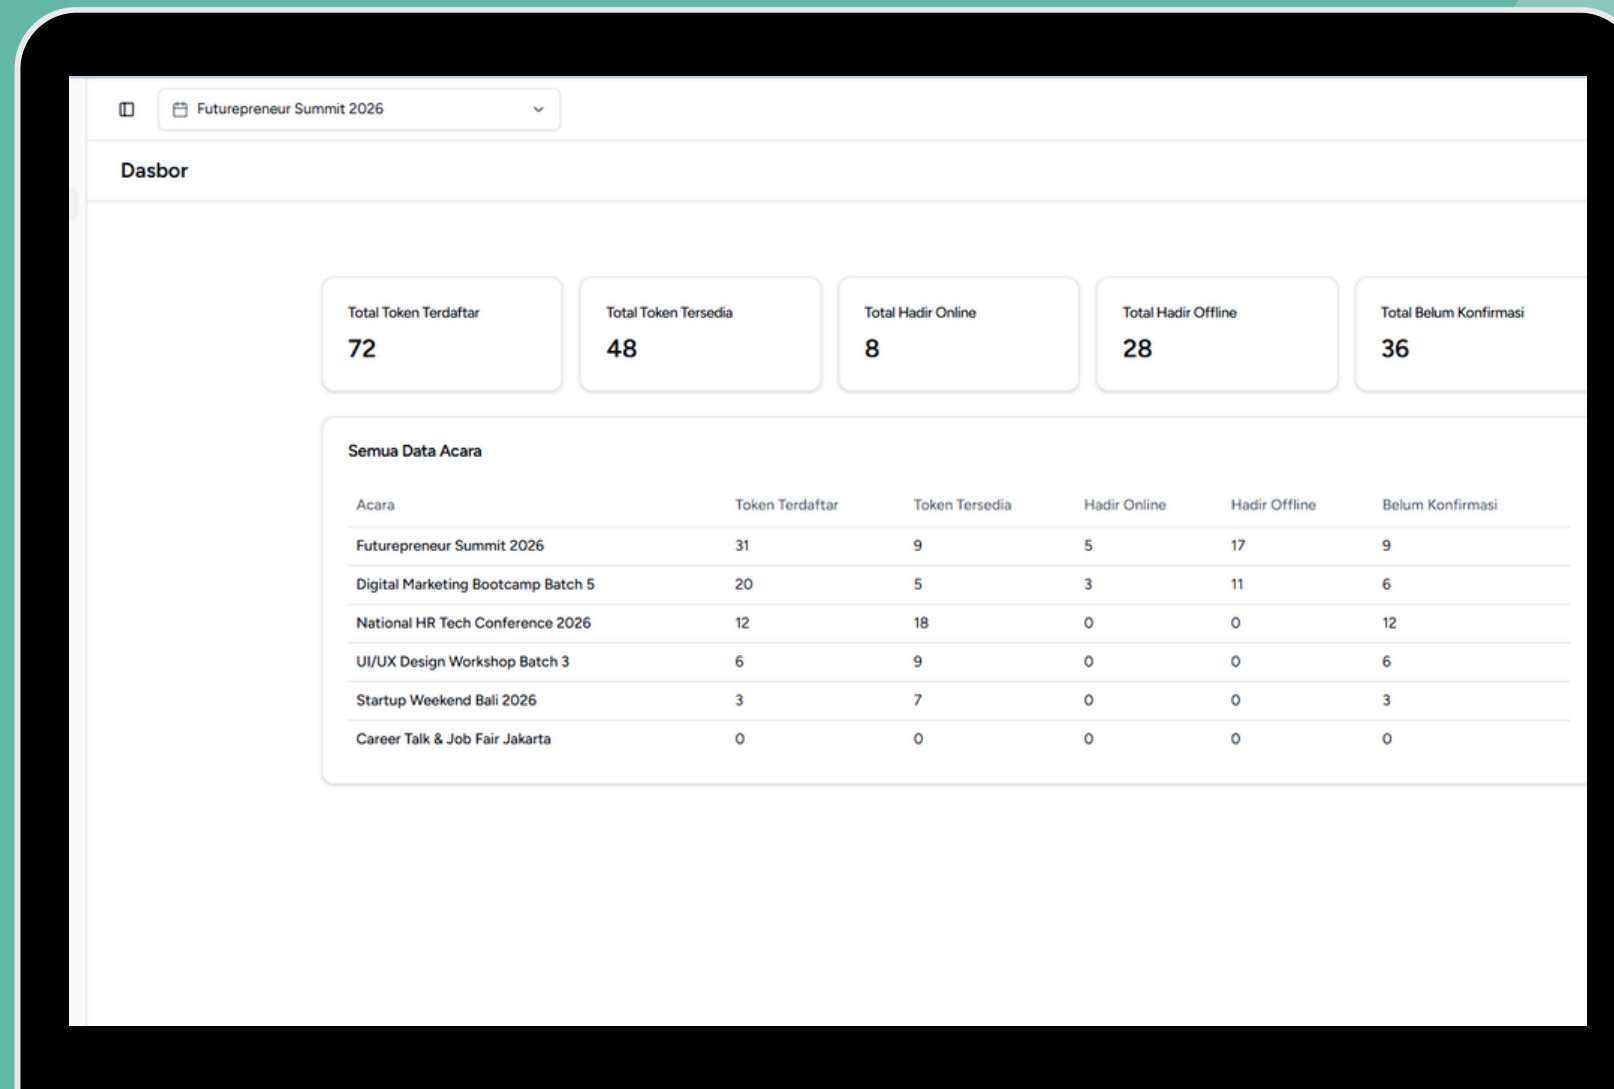

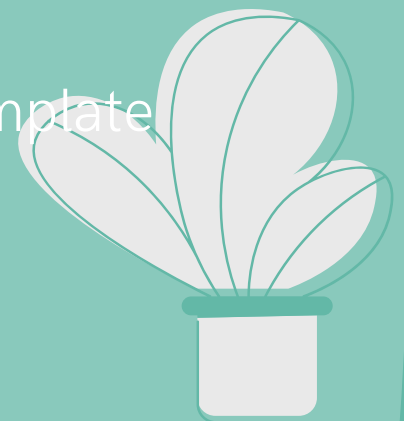

- Next.js, Typescript, Redux, Redux Thunk
- Material UI
- Jest & React Testing Library

Event & Ticketing Management System

An internal event management platform used to handle end-to-end event operations — event creation, QR-code based ticket generation, participant registration and check-in, digital certificate issuance, venue/location management, and role-based user access — with centralized activity logging for tracking and auditability.

My contribution :

- Contributed to system stability and reliability by fixing bugs
- Designed and built the entire system independently from scratch, end-to-end — system architecture, backend, frontend, and database design
- Built an interactive drag-and-drop template designer

Tech Stack

- Laravel, PHP, MySQL
- Inertia.js, React, Tailwind

Gauvel Compliance

An internal tool for the Nano Group's Compliance & Legal team. Indonesian financial regulation requires every licensed entity to file a large volume of recurring reports — daily through annual — to different regulators, each via its own portal.

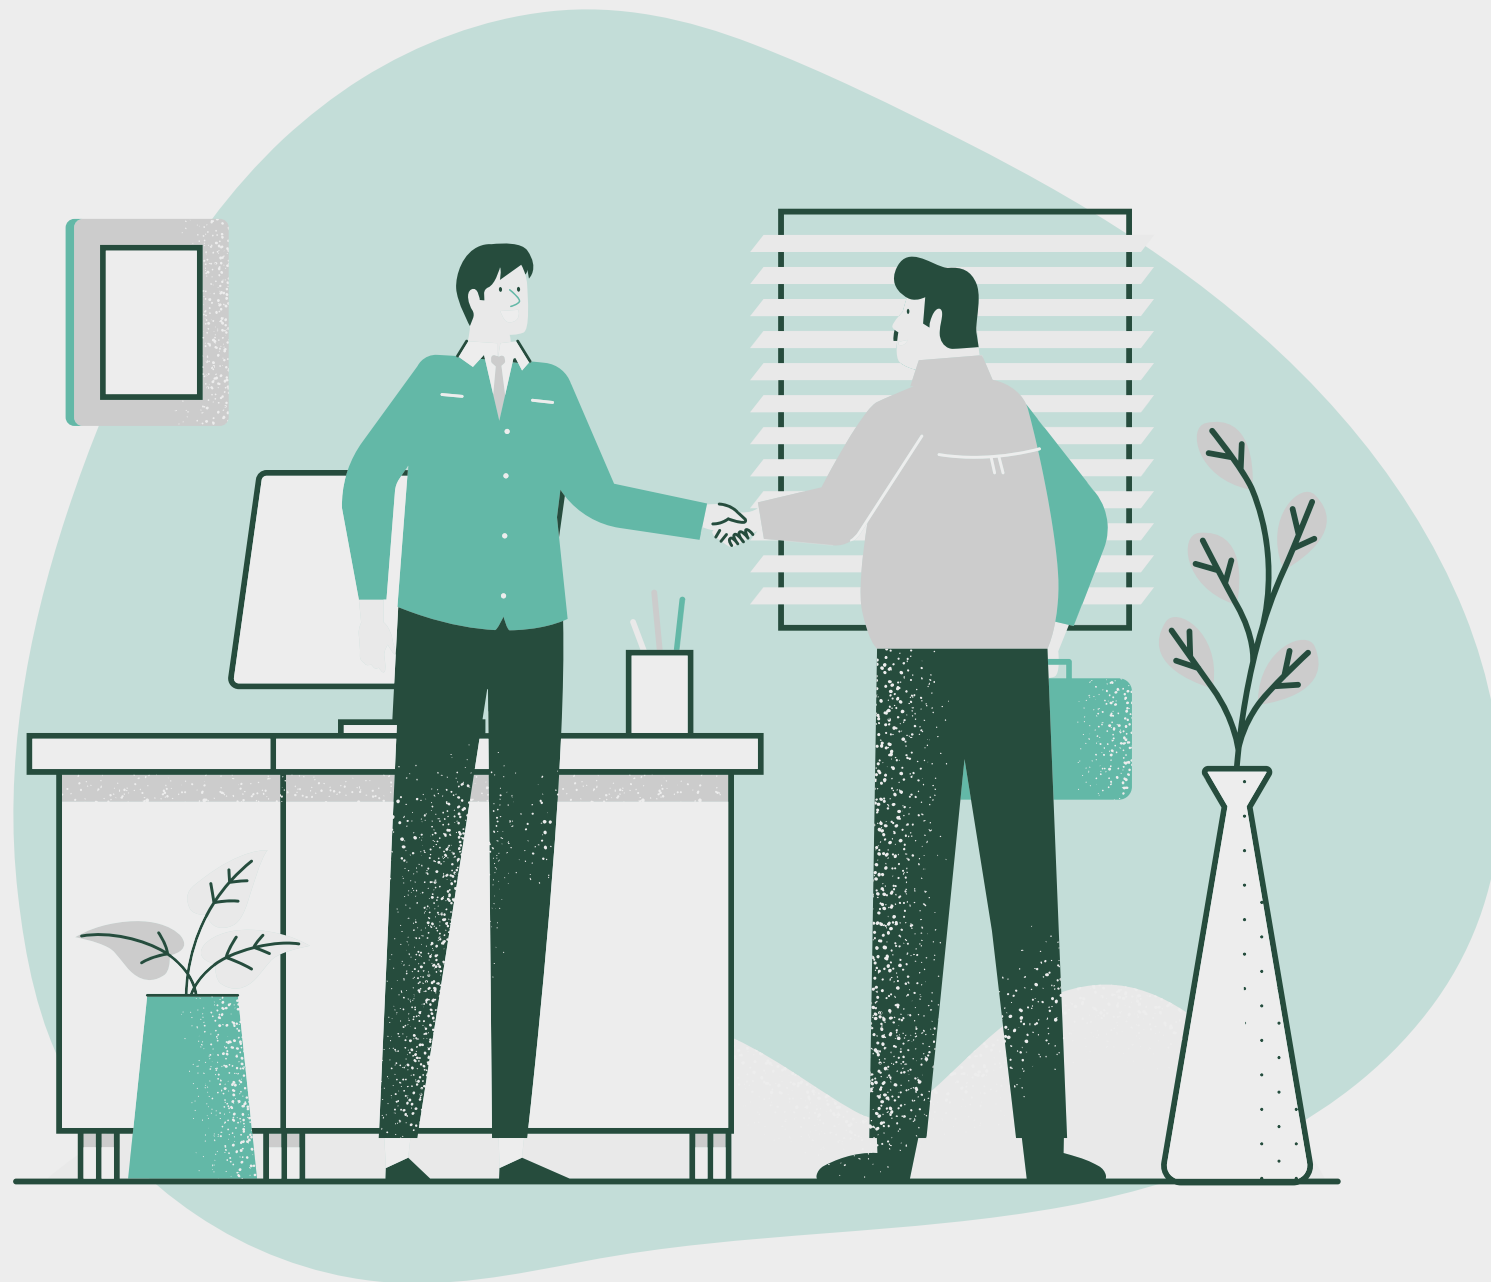

My contribution :

- Implement UI design from legal to code stability
- Build architecture for backend and frontend
- Create generated documents AI supports
- Adding unit tests to improve overall reliability

Tech Stack

- Next.js, Typescript, Zustand, HeroUI
- NestJS, PostgreSQL, GCS, Sendgrid, Jest
- Monorepo, Gemini

Thank You
